

TT[®] ALGO PRIME

Our fastest algorithmic trading engine.

Optimize the performance of your ADL[®] algo strategies and reduce latency with TT Algo Prime. The latest addition to our TT Premium Services offering, TT Algo Prime is a premium version of the TT algo server, offering lower-latency algorithmic trading.

TT Algo Prime significantly increases the performance of your ADL algo strategies by combining your algorithm's logic with direct exchange connectivity for market data and order routing into a single process.

TT Algo Prime is deployed on a liquid-cooled, overclocked server designed specifically for low-latency trading and is tuned to create TT's fastest algorithmic trading engine.

Where microseconds are increasingly important, a dedicated TT Algo Prime server could improve the execution of your trading strategy.

PERFORMANCE AND BENEFITS

- ◆ Leverage a server that is approximately 70%* faster than our next fastest dedicated algo server solution
- ◆ Streamline your market data consumption by receiving prices only for the products needed
- ◆ Remove inter-process communication latency, combining logic with direct exchange connectivity and order routing into a single process
- ◆ Increase efficiency with reduced network hops when sending orders or receiving fills from the exchange

* Based on lab performance tests
